

TracerPlus is an Affordable and Quick Software Solution to Include Out-of-Box Solutions, Along with Being a Software Development Tool.

TracerPlus provides your workforce mobile solutions that can be customized to match their traditional paper based forms and processes, resulting in a smooth transition to a more efficient system. With a variety of features including configurable field settings and user-defined flow of data, there is virtually no limit to the number of functions that can be adapted to fit your specific data collection needs.

MT20xx

We will review some of the **FREE SOLUTION APPS** to include apps specifically made for the Motorola MT20xx unit along with solutions for some of Motorola's mobile terminals to include MC70/MC75A, MC9190, MC3100 series, ES400, VC5090 and more.

TracerPlus can work in batch (gather information, then set terminal into a cradle to download) or a real-time wireless environment (WiFi, WWAN or Cellular networks). The presentation will also touch on where TracerPlus can fit into the RFID world, specifically with asset tracking.

MC75A
