

BCCD's TranASAP data collection software is an inexpensive, real-time, automated data collection system that utilizes SAP screens in a mobile environment.

This presentation is designed to review BCCD's SAP based RF and barcoding solutions. Included in the presentation will be:

- SAPs ITSmobile and Console development tools:
 - When to recommend one solution over the other and the components of building a system with this technology, reviewing the pitfalls and success' of each.
- BCCD's pre-built transactions utilizing ITSmobile and Console
- The concept of developing a data collection solution from the perspective of inventory tracking and warehouse management expertise
- Case studies and review what the competition does today
- RF scanning and barcode printing – “Best of Breed” solutions
- What is the Return on Investment (ROI)?
- Q & A - with the technical experts on both ITSmobile and Console
