

BCC Distribution's Picture Proof Data Collection Kit

combines a scanner, color camera, real-time communications and software -
all bundled in one unit!

BCCD's Picture Proof Software has been designed to automate the functions of taking a picture and associating it with specific collected data through barcode scanning or manual entry. The system automatically names and tracks the picture by the data that is collected utilizing the hand held terminal, thus eliminating human error during the entry of associating a picture with the data.

Instead of having a separate scanner and camera, BCCD's Picture Proof is designed to utilize one single, portable, hand held device (barcode scanner, 2 mps camera, phone, and/or RF terminal) that can communicate to a PC or server in real time or batch. Real-time communications can be done via RF (within a warehouse) or the cell phone network (outside the four walls). The data resides in a flat file on the PC.

BCCD's Picture Proof system is designed to automate the following business tasks:

- Shipping Validation – Visual verification of orders (finished goods) at the shipping dock
- Quality Control Inspection
- Return of Goods
- Proof of Delivery
- Asset Tracking and Identification
- Retail Shelf Monitoring

The standard Picture Proof Data Collection Kit Includes:

- Motorola MC55 Terminal (configured with a color camera, RF and/or phone)
- MC55 Cradle, Power Supply, Line Cord & USB
- BCC Distribution's Picture Proof Software – 1 License
- One Year Warranty for Terminal Hardware and Software
(Optional 3-year maintenance with comprehensive coverage is available for the terminal)
