RFS7000 Wireless LAN Switch/Controller

Enabling a secure and reliable Wireless Enterprise for campus, data center and large deployments

FEATURES

Wi-NG operating system — delivering a unified voice, data and RF management platform
Improve business process flow with one platform for wireless voice, video, data and multiple RF technologies — such as RFID, Wi-Fi (including 802.11n) and future technologies such as Wi-MAX; rich enterprise-class functionality includes seamless roaming across L2/L3 deployments, resilient failover capabilities, comprehensive security, toll-quality voice and other value-added services, such as multi-RF locationing

Role-based wired/wireless firewall
Comprehensively secures and protects the wired and wireless network against attacks and unauthorized access at Layer 2 and Layer 3 with stateful inspection; ability to create identity and location-based policies provides granular control of network access

SMART RF Management
Next generation self-healing: enables the WLAN to automatically and intelligently adapt to changes in the RF environment to eliminate unforeseen gaps in coverage

High performance Wireless LAN Switch/Controller for the demanding enterprise networks
Designed for large scale, high bandwidth deployments, the RFS7000 Wireless LAN (WLAN) Switch/controller provides highly scalable enterprise mobility in large enterprises, campuses and data centers. Motorola’s landmark Wireless Next Generation (Wi-NG) operating system enables a comprehensive set of services, offering unmatched security, reliability and mobility for high performance 802.11n networks. Easy to deploy and manage, the RFS7000 provides a converged platform to deliver multimedia applications (data, voice, video), wireless networking, and value-added mobility services such as secure guest access and locationing for multi-RF networks.

Cost-effective centralized management
The RFS7000 provides the tools you need to simplify and minimize the costs associated with day-to-day management of mobility solutions. The Wi-NG operating system provides unified management of network hardware, software configuration, and network policies, complete with built-in process monitors and troubleshooting tools. A valuable modular software offering, the RF Management Suite, provides centralized control over the entire lifecycle of your Motorola mobility solution — allowing you to easily design, deploy, monitor and secure your wireless network.

Raising the bar on enterprise-class performance
The RFS7000 offers a multicore, multithreaded Wi-NG operating system, intended for large scale, high bandwidth enterprise deployments. It easily handles from 8,000 to 98,000 mobile devices and 256 to 3,000 802.11 dual-radio thin a/b/g access points or 1,024 adaptive access points (AP-5131 a/b/g or AP-7131 a/b/g/n) per switch/controller. The RFS7000 delivers the investment protection enterprises require: Motorola’s patent pending clustering technology provides a 12X capacity increase, and a build-as-you-grow expansion of your network.

Gap-free security for the Wireless Enterprise
Comprehensive network security features keep wireless transmissions secure and provide compliance for HIPAA and PCI. The RFS7000 provides gap-free security for the WLAN network, following a tiered approach to protect and secure data at every point in the network, wired or wireless. This complete solution includes a wired/wireless firewall, a built-in Wireless Intrusion Protection System (IPS), an integrated IPSec VPN gateway, AAA RADIUS server and secure guest access with a captive web portal, reducing the need to purchase and manage additional infrastructure. Additional security features include MAC-based authentication, 802.11w to secure management frames, NAC support, anomaly analysis and more.

Motorola also offers a Common Criteria Evaluation Assurance Level 4 (CC EAL4) and FIPS 140-2 certified version of the RFS7000.

Enabling toll-quality voice for the Wireless Enterprise
Support for VoWLAN provides cost-effective voice services throughout the wireless enterprise, enabling push-to-talk and more for employees inside the four walls as well as in outside areas such as the yard. The rich feature set provides granular control over the many wireless networking functions required to deliver high performance persistent clear connections with toll-quality voice. Quality of service (QoS) ensures superior performance for voice and video services. WMM Admission Control and 802.11k radio resource management, including TSPEC and SIP Call Admission Control, ensure dedicated bandwidth for
Adaptive AP: extending the enterprise
Enables centralized management of mesh access points at remote sites including automatic firmware upgrades; provides site survivability for remote locations with 802.11a/b/g/n networks for unparalleled resiliency.

Wireless Intrusion Protection System (IPS)
The built-in wireless IPS defends against over-the-air attacks by leveraging the sensing capabilities of Motorola’s AP300, AP51x1, or AP-7131 access points.

Enhanced End-to-End Quality of Service (QoS)
Enhances voice and video capabilities; prioritizes network traffic to minimize latency and provide optimal quality of experience; SIP Call Admission Control and Wi-Fi Multimedia Extensions (WMM-Power Save) with Admission Control enhances multimedia application support and improves battery life and capacity; network optimization through granular bandwidth contracts based on bandwidth utilization network load and number of users for different applications being used, in different locations; TSPEC Admission Control ensures ample bandwidth and a superior user experience for VoIP calls.

RFS7000 network architecture
The RFS7000 offers the comprehensive functionality necessary to extend wireless voice and data access inside the largest of enterprises — as well as to remote locations inside and outside the enterprise campus walls.
voice calls as well as better control over active voice calls for a variety of VoIP handsets. Layer 3 hyper-fast secure roaming combines with readiness for external fixed-mobile convergence (FMC) solutions, enabling seamless voice services with true mobility across the enterprise.

**Enabling value-added mobility services**
The RFS7000 supports seamless mobile access to multi-RF networks, enabling locationing and simplified real-time asset tracking throughout the network. In addition, the RFS7000 offers unparalleled management flexibility — the user is free to choose between Motorola’s RF Management System, a partner portal or any other enterprise application for central monitoring and visualization. Secure guest access, onboard RADIUS services, granular access, bandwidth control at the client level and automatic load balancing enable highly optimized, flexible and secure hotspot deployments managed centrally through one console.

**Adaptive AP for increased network flexibility — and site survivability**
The RFS7000 simplifies and reduces the cost of extending mobility to remote and branch offices as well as telecommuters. Motorola’s Independent Mesh Access Points (AP-51X1 a/b/g and AP-7131 a/b/g/n) can be deployed at remote locations yet centrally managed in the Network Operations Center (NOC) through the RFS7000 (single switch/controller or a cluster for scalability). An IPSec VPN tunnel secures all traffic between the access points and the wireless switch/controller. Remote Site Survivability (RSS) mesh access points deliver secure uninterrupted wireless service — providing unparalleled resiliency that surrounds a WLAN link outage.

**Put your RF on autopilot**
The Wi-NG operating system delivers SMART RF Management, which provides the dynamic RF tuning required for optimal network performance. This feature takes self-healing to the next level, dramatically reducing network monitoring IT costs by enabling the WLAN to intelligently adapt to the ever-changing RF environment.

The ability to dynamically adjust the power and channels on any access port automatically eliminates the gaps in coverage that occur when an AP fails or there is a change in your environment — for example, the introduction of an increased volume of liquid or metal — all without any physical intervention. The elegant feature protects against under- or over-powering — scenarios that could reduce performance and network availability. And adjustments are completely transparent — there is no impact on voice calls and data sessions in progress — protecting the quality of service and the user experience to ensure user productivity.

**Maximize benefits — and minimize costs**
All the enterprise class services such as security, voice, performance and resiliency are built into the Wi-NG operating system — the innovative and modular operating system (OS) for the RFS7000. These comprehensive services come at no additional cost and are packaged together to make mobility work — even better.

**End-to-end support**
As an industry leader in mobility, Motorola offers the experience gained from deploying mobility solutions all over the globe in many of the world’s largest enterprises. Leverage this expertise through Motorola Enterprise Mobility Services, which provides the comprehensive support programs you need to deploy and maintain your RFS7000 at peak performance. Motorola recommends protecting your investment with Service from the Start Advance Exchange Support, a multi-year program that provides the next-business-day device replacement, technical software support and software downloads you need to keep your business running smoothly and productively. This service also includes Comprehensive Coverage, which covers normal wear and tear, as well as internal and external components damaged through accidental breakage — significantly reducing your unforeseen repair expenses.

---

**Packet Forwarding**
802.1D-1999 Ethernet bridging; 802.11-802.3 bridging; 802.1Q VLAN tagging and trunking; proxy ARP; | packet steering-redirection

**Wireless Networking**
Wireless LAN: Supports 256 VLANs; multi-ESS/BSSID traffic segmentation; VLAN to ESSID mapping; auto assignment of VLANs (on RADIUS authentication); power save protocol polling; pre-emptive roaming; VLAN Pooling and dynamic VLAN adjustment; IGMP Snooping

Bandwidth management: Congestion control per VLAN; per user based on user count or bandwidth utilization; dynamic load balancing thin and Adaptive APs in a cluster. Bandwidth provisioning via AAA server.

**Access ports**
Supports 256 “thin” 802.11a/b/g access points for L2 or L3 deployment per switch and 3,072 802.11a/b/g AP300s per cluster; Legacy support: AP100 for L2 deployments only

**Adaptive AP**
Supports adoption of 1,024 adaptive AP-51X1 802.11a/b/g and AP-7131 802.11a/b/g/n access points in Adaptive Mode per switch/controller and 12,288 per cluster; multiple country configuration support; Legacy support: AP-4131 port conversion for L2 deployments only

**Layer 2 or Layer 3 deployment**
Thin access points and adaptive AP-51X1 802.11a/b/g and AP-7131 802.11a/b/g/n access points

**IPv6 client support**

---

**Real Time Locationing System (RTLS)**
Provides rich locationing services to enable real-time enterprise asset-tracking through support for 802.11, RFID and third party locationing solutions — including industry leaders AeroScout, Ekahau, and Newbury Networks. Standards-based support for: EPC Global ALE interface for processing and filtering data from all active and passive tags; and EPC Global LLRP interface for passive RFID tag support

**Clustering and failover features**
Supports multiple levels of redundancy and failover capabilities to ensure high availability networks; provides a single virtual IP (per VLAN) for the cluster for use as a default gateway by mobile devices/wired infrastructure, on-board DHCP/AAA server synchronized failover; multi-platform license sharing enables deployment of cost-effective networks

**True mobility**
Virtual AP provides better control of broadcast traffic and enables multiple mobile and wireless applications with quality of service when network is congested Pre-emptive Roaming ensures Motorola mobile devices roam before signal quality degrades; Power Save Protocol optimizes battery life

---

**RFS7000 Specifications**

---

**Continue on back**
Layer 3 Mobility (Inter-Subnet Roaming)
Radio frequency automatic channel select (ACS). Transmit power control management (TPC), Country code-based RF configuration; 802.11b, 802.11g, 802.11a, and 802.11n

Network Security
Role-based wired/wireless firewall (12-17) with stateful inspection for wired and wireless traffic, Active firewall sessions — 205,000 per switch/controller and 2,460,000 per cluster, protects against IP Spoofing and ARP Cache Poisoning

Access Control Lists (ACLs): L2/L3/L4 ACLs

Wireless IDS/IPS:
Multi-mode rogue AP detection, Rogue AP Containment, 802.11n Rogue Detection, Ad-Hoc Network Detection, Denial of Service protection against wireless attacks, client blacklisting, excessive authentication/association; excessive probes; excessive disassociation/deauthentication; excessive decryption errors; excessive authentication failures; excessive 802.11 re-association; excessive crypto IV failures [TKIP/CCMP replay]; Suspicious AP, device in ad-hoc mode, unauthorized AP using authorized SSID, EAP flood, fake AP flood, ID theft, ad-hoc advertising unauthorized SSID

Geofencing:
Add location of users as a parameter that defines access control to the network

WPS sensor conversion: Supported on the AP300 and the Adaptive AP-5131 and AP-7131

Anomaly Analysis:
Source Media Access Control (MAC) = Dest MAC, Illegal frame sizes, Source MAC is multicast, TKIP countermeasures; all zero addresses

Authentication:
Access Control Lists (ACLs), pre-shared keys (PSK); 802.1x/EAP — transport layer security (TLS), tunnelled transport layer security (TLS), protected EAP (PEAP), Kerberos Integrated AAA/RADIUS Server with native support for EAP-TLS, EAP-PEAP (includes a built in user name/password database; supports LDAP), and EAP-SIM

Transport encryption:
WEP 40/128 (RC4), KeyGuard, WPA — TKIP, WPA2-CCMP (AES), WPA2-TKIP

802.11w:
Provides origin authentication, integrity, confidentiality and replay protection of management frames for AP300

IPSec VPN gateway:
Supports DES, 3DES and AES-128 and AES-256 encryption, with site-to-site and client-to-site VPN capabilities; supports 2,048 concurrent IPSec tunnels per switch/controller — 24,576 per cluster

Secure guest access (Hotspot provisioning):
Local Web based authentication; URL redirection for user login; customizable login/welcome pages; support for external authentication/billing systems; usage-based charging

Wireless RADIUS Support:
User Based VLANs (Standard)
Motorola Vendor Specific Attributes:
Location Based Authentication (Motorola VSA)

NAC support with third party systems from Microsoft and Symantec

Real Time Locationing System (RTLS)
RSSI based triangulation for Wi-Fi assets
Tags supported: Ekahau, Aeriscut, Newbury, Gen 2 Tags

RFID support: Compliant with LLRP protocol. Built-in support for the following Motorola RFID readers: fixed (XR440, XR450, XR480); mobile (RD5000-G RFID)

Optimized Wireless QoS
RF priority: 802.11 traffic prioritization and precedence
Wi-Fi Multimedia: WMMP-power save with 802.11e extensions, WMMP-U-APSD
IGMP snooping: Optimizes network performance by preventing flooding of the broadcast domain
SIP Call Admission Control: Controls the number of active SIP sessions initiated by a wireless VoIP phone

802.11k:
Provides radio resource management to improve client throughput (11k client required)

Classification and marking:
Layer 1-4 packet classification; 802.1p VLAN priority; DiffServ/TOS

System Resiliency and Redundancy
Active-Standy, Active-Active and N+1 redundancy with access port and MU load balancing; Critical resource monitoring
Virtual IP: Single virtual IP (per VLAN) for a switch cluster for use as a default gateway for mobile devices or by wired infrastructure.

SMART RF: Network optimization to ensure user quality of experience at all times by dynamic adjustments to channel and power (on detection of RF interference or loss of RF coverage/neighbor recovery)

Dual Firmware bank supports Image Failover capability

Management
Command line interface (serial, telnet, SSH); secure Web-based GUI (SSU) for the wireless switch/controller and the cluster; SNMP v1/v2/v3, SNMP traps — 40+ user configurable options; Syslog; TFTP Client; secure network time protocol (SNTP), text-based switch/controller configuration files; DHCP (client/server/relay), switch/controller auto-configuration and firmware updates with DHCP options; multiple user roles (for switch/controller access); MIDs (MIB-II, Ethernet), wireless switch/controller specific monitoring and configuration); Email notifications for critical alarms; MU naming capability

Physical Characteristics
Form factor: 1U Rack Mount
Dimensions: 1.75 in. H x 17.32 in. W x 15.39 in. D
Weight: 13.5 lbs./6.12 kg
Physical interfaces: 4 10/100/1000 Cu/SFP Ethernet interfaces, 1 10/100 OOB port, 1 CF card slot, 2 USB slots, 1 serial port (RJ45 style)
MTBF: >65,000 Hours

Power Requirements
AC input voltage: 80 – 264 VAC 50/60Hz
Max AC input current: 6A@115 VAC, 3A@230 VAC
Input frequency: 47 Hz to 63 Hz

User Environment
Operating temperature: 32° F to 104° F /0° C to 40° C
Storage temperature: -40° F to 158° F /-40° C to 70° C
Operating humidity: 5% to 85% (w/o condensation)
Storage humidity: 5% to 85% (w/o condensation)

Regulatory
Product safety: UL/cUL 60950-1, IEC/EN60950-1
EMC compliance: FCC (USA), Industry Canada, CE (Europe), VCCI (Japan), C-Tick (Australia/New Zealand)
